PLEASE NOTE THE FOLLOWING: The SAMPLE STATION # refers to the location sampled. The term TRUE BASIN is used to define areas within a lake that are separated by shallow reefs or shoals and therefore function as separate lakes. There are approximately 50 lakes in the state that have more than 1 True Basin. True Basin Characteristics are now being included in the first section of these reports to enable users of the Phosphorous Loading Methodology to better evaluate the data. If there is no data for a particular True Basin, True Basin Characteristics must be obtained from the DEP. NICKERSON L has 1 True Basin(s).

## WATER QUALITY SUMMARY

### **NICKERSON LAKE, NEW LIMERICK**

MIDAS: 1036, Sample Station # 1

The Maine Department of Environmental Protection (ME-DEP) and the Volunteer Lake Monitoring Program (VLMP) have collaborated in the collection of lake data to evaluate water quality, track algal blooms, and determine water quality trends. This data set does not include bacteria, mercury, or nutrients other than phosphorus.

Water quality monitoring data for Nickerson Lake have been collected since 1977. During this period, 9 years of basic chemical information was collected in addition to Secchi Disk Transparencies (SDT). In summary, the water quality of Nickerson Lake is considered above average based on measures of SDT, total phosphorus (TP), and Chlorophyll-a (Chla). The potential for nuisance algal blooms on Nickerson Lake is low.

Water Quality Measures: Nickerson Lake is an uncolored lake (average color 12 SPU) with an average SDT of 8.6 m (28 ft). The range of water column TP for Nickerson Lake is 4 - 9 parts per billion (ppb) with an average of 6 ppb. Chla ranges from 1.1 - 1.9 ppb with an average of 1.5 ppb. Recent dissolved oxygen (DO) profiles show very little DO depletion in deep areas of the lake. The potential for phosphorus to leave the bottom sediments and become available to algae in the water column (internal loading) is low. Oxygen levels below 5 parts per million stress certain cold water fish, and a persistent loss of oxygen may eliminate or reduce habitat for sensitive cold water species.

See ME-DEP Explanation of Lake Water Quality Monitoring Report for measured variable explanations. Additional lake information can be found on the Internet at <http://www.lakesofmaine.org/> and/or <http://www.maine.gov/dep/blwq/lake.htm>, or telephone the ME-DEP at 207-287-3901 or the VLMP at 207-783-7733.
